1.0 Non-Financial Analysis (Ferrari N.V., 2022-2024)

1.1 Introduction

Ferrari N.V. is one of the most iconic and exclusive automotive manufacturers in the world, known for combining advanced engineering with luxury craftsmanship. Incorporated in the Netherlands and headquartered in Maranello, Italy, Ferrari operates at the top of the ultra-luxury and supercar segment and targets a highly selective global customer base. Over the last three years (2022-2024) the company has gone through a period of strategic transformation and industrial expansion as it prepares for the electrification of the automotive industry. During this period Ferrari has balanced its long-standing commitment to controlled production volumes with a broader product offering and major investments in innovation and new manufacturing capabilities.

The governance structure of Ferrari remained highly stable throughout these years, anchored by its largest shareholder, Exor N.V., which held nearly one quarter of common shares and more than one-third of voting power as of early 2025. The presence of Piero Ferrari as a major shareholder further reinforces continuity in strategic direction, while the appointment of CEO Benedetto Vigna in 2021 marked a deliberate shift toward the technological competencies needed for the next phase of performance mobility. This balance of tradition and innovation forms the backdrop for Ferrari's development strategy during the analysed period.

The company's positioning is supported by exceptional brand equity, a loyal customer base and a resilient demand profile that remained strong despite macroeconomic uncertainty. These qualities make Ferrari an unusually strong borrower compared with typical firms in the automotive sector. The following non-financial analysis evaluates the company's operating environment, competitive dynamics, governance stability and strategic strengths and risks, forming the basis for understanding Ferrari's creditworthiness before moving to the financial analysis and projections.

1.2 Non-financial analysis

Over the past three years, Ferrari's non-financial foundations have remained exceptionally strong, supported by its brand prestige, competitive strategy and consistent relationships with customers, suppliers and institutions.

As the company transitions toward hybrid and electric vehicles, its operational, sectoral and regulatory environment plays a critical role in assessing overall risk and long-term stability. Ferrari operates in the ultra-luxury performance automotive sector, a market with high entry barriers due to the technological capabilities, brand-building requirements and cost of sustaining a global distribution network that it requires. The company's main competitors

include Lamborghini, Porsche's high-performance divisions, McLaren, Aston Martin and niche ultra-exotics such as Pagani. From 2022 to 2024 this competitive field saw rapid innovation in hybrid performance models, record deliveries for some rivals and a cautious shift toward electrification. Ferrari's position nevertheless remains unique: it continues to practise strict volume discipline and prioritises exclusivity over scale. The launch of the Purosangue, Ferrari's first four-door model, showed this principle in practice. Initial demand was so strong that the company halted new orders to prevent excessive waiting times. This approach has helped Ferrari protect its pricing power and preserve the scarcity that defines its brand identity.

Beyond its product portfolio, Ferrari's competitive strength is closely tied to the capabilities of its workforce. The company employs several thousand highly skilled engineers, artisans and technicians whose expertise is fundamental to maintaining the brand's quality standards. In recent years Ferrari has expanded recruitment in battery systems, software engineering and electronics to support its electrification strategy. At the same time, the company continues to invest in internal training so that long-serving employees can move into new technological areas. This human-capital base reduces operational execution risk and ensures that Ferrari keeps the craftsmanship and engineering depth needed to compete in a rapidly changing automotive landscape.

Product strategy remains one of Ferrari's greatest strengths. The company maintains a carefully structured portfolio of Range models, limited Special Series models, ultra-exclusive Icona vehicles and unique Supercars. This multi-tiered approach creates an aspirational ladder for customers and stabilises order books through economic cycles. From 2022 to 2024 Ferrari also accelerated its electrification roadmap. The most important milestone was the opening of the new e-building in Maranello in June 2024, a state-of-the-art facility designed to produce internal combustion engines, hybrid systems and the first fully electric Ferrari, whose technology Ferrari presented in October 2025 ahead of first deliveries in 2026. This investment signals both readiness and alignment with upcoming regulatory requirements.

Equally important is Ferrari's commitment to research and development. The company allocates significant resources to aerodynamics, lightweight materials, high-performance hybrid systems and, increasingly, electric powertrains. Ferrari's involvement in motorsport, particularly Formula 1 and endurance racing, reinforces this culture by creating a continuous flow of technology that eventually reaches road cars. As electrification accelerates, Ferrari's R&D pipeline and engineering culture position the company to develop proprietary solutions that preserve its performance identity while meeting global environmental standards.

At the operational level, Ferrari's manufacturing footprint is highly concentrated, with nearly all production in Maranello and Modena. This concentration ensures tight quality control and preserves craftsmanship, but it exposes the company to localised risks such as natural

disasters, energy shocks or supply interruptions. Ferrari mitigates these risks through close supplier integration, in-house production of key e-powertrain components and flexibility within the new e-building. Long-standing relationships with specialised suppliers, combined with relatively low production volumes, make Ferrari's supply chain more resilient than those of mass-market producers.

Ferrari's non-financial strength is further reinforced by its brand and marketing strategy. Beyond being a car manufacturer, Ferrari is a luxury brand with a global cultural presence and one of the strongest brand identities in the world, built on heritage, racing success and exclusivity. Its marketing approach, rooted in scarcity, customer selectivity and experiential engagement, supports strong resale values and sustained desirability. Activities such as Ferrari Classiche, museum programmes, lifestyle events and personalised Tailor Made designs deepen customer relationships and reinforce the brand's aspirational status. Together these elements protect Ferrari from demand fluctuations and strengthen its pricing power.

Customer relationships are a critical pillar of Ferrari's strength. Approximately 81% of 2024 sales were made to existing clients, and nearly half to clients who already owned more than one Ferrari. Loyalty is reinforced through personalised experiences, track programmes, restoration services and heritage initiatives, all of which strengthen Ferrari's ecosystem and support consistently high demand. This level of loyalty significantly lowers market risk and makes revenue more predictable, which is highly relevant for credit evaluation.

Regulatory and institutional relationships also influence Ferrari's risk profile. The company operates within the strict environmental framework of the European Union, which requires all new cars sold in the EU to be zero-emission from 2035. Ferrari prepared early by announcing a carbon-neutrality target for 2030 and by investing heavily in electrification. In 2024 the company also entered Italy's cooperative tax compliance programme, which reflects transparent governance and reinforces institutional trust, an important consideration for lenders.

Overall, Ferrari's non-financial profile during 2022-2024 shows a company with exceptional competitive advantages, strong governance, a highly skilled workforce and a very loyal customer base, balanced against operational concentration risk and the challenges of electrification. These qualitative factors point to a borrower with stable long-term prospects, a strong ability to adapt to regulatory pressure and a brand that offsets the usual volatility of the automotive sector. This provides a solid basis for evaluating Ferrari's financial performance and the feasibility of the proposed investment project in the following sections.

2.0 Financial Analysis (Ferrari N.V., 2022-2024)

Ferrari N.V. is a financially strong, highly profitable luxury car manufacturer operating in the global ultra-high-end performance car market. Its financial profile is characterised by:

- Growing revenues
- High pricing power
- Exceptional return on equity
- Conservative leverage
- Strong free cash flow generation
- A loyal, high-income customer base
- Capable management

Together these translate into stable, positive and predictable financial performance. This section analyses Ferrari's income statement, balance sheet, cash flows and key ratios for 2022-2024 under IFRS. All figures are the exact amounts reported in Ferrari's consolidated financial statements (Form 20-F) and are taken from the accompanying Excel model, so every table in this report ties back to the model.

2.1 Income Statement Analysis

Ferrari achieved strong revenue growth in 2022-2024, driven by higher deliveries, a richer product offering and more activity in lifestyle and sponsorship. Profitability grew every year, with double-digit growth in both EBIT and net profit.

Table 1: Income statement 2022-2024

€ million	2022A	2023A	2024A
Net revenues	5,095	5,970	6,677
Cost of sales	(2,649)	(2,996)	(3,329)
Gross profit	2,446	2,974	3,347
Selling, general and administrative costs	(428)	(463)	(561)
Research and development costs	(776)	(882)	(894)
Other expenses, net	(22)	(19)	(12)
Result from investments	6	6	8
Operating profit (EBIT)	1,227	1,617	1,888
Financial income	84	132	147
Financial expenses	(133)	(147)	(146)
Profit before taxes	1,178	1,602	1,889
Income tax expense	(238)	(345)	(363)
Net profit	939	1,257	1,526
Depreciation and amortisation	546	662	667
EBITDA	1,774	2,280	2,555
Margins			
Revenue growth	-	17.2%	11.8%
Gross margin	48.0%	49.8%	50.1%
EBITDA margin	34.8%	38.2%	38.3%
EBIT margin	24.1%	27.1%	28.3%
Net profit margin	18.4%	21.1%	22.9%
Cost of sales (% of revenue)	52.0%	50.2%	49.9%
SG&A (% of revenue)	8.4%	7.7%	8.4%
R&D (% of revenue)	15.2%	14.8%	13.4%

Source: Ferrari N.V. Form 20-F 2023 and 2024 and Excel model (Income Statement).

Revenue growth: Net revenues increased from €5,095m in 2022 to €6,677m in 2024, a CAGR of 14.5%, supported by pricing strength and customer demand across all major regions. The Purosangue, the 296 GTB/GTS, the SF90 range and the limited-series Daytona SP3 contributed most to the expansion.

Profitability: EBITDA margin improved from 34.8% in 2022 to 38.3% in 2024 and EBIT margin from 24.1% to 28.3%, reflecting operating leverage, a favourable mix and growing revenues. Net margin rose to 22.9% in 2024, well above mass-market carmakers and most luxury peers. Net financial expenses fell from €50m in 2022 to a small net financial income in 2024.

Cost structure: Cost of sales rose with production volumes but fell from 52.0% to 49.9% of revenue as the mix shifted toward high-margin models. SG&A stayed between 7.7% and 8.4% of revenue, and R&D fell from 15.2% to 13.4%, so both grew more slowly than revenue while still funding innovation and electrification.

Overall assessment: The income statement shows a highly profitable business with growing revenues and stable demand from a high-income customer base, which supports stable and expanding profitability.

2.2 Balance Sheet Analysis

Ferrari maintains a strong and liquid balance sheet with moderate leverage, growing total assets and growing equity. The company follows a disciplined investment strategy, funding growth mainly through internal cash generation while keeping flexibility for technological development, electrification and shareholder distributions.

Table 2: Balance sheet at 31 December 2022-2024

€ million	2022A	2023A	2024A
Assets			
Goodwill	785	785	785
Intangible assets	1,307	1,420	1,546
Property, plant and equipment	1,458	1,575	1,829
Investments and other financial assets	60	68	81
Deferred tax assets	203	218	237
Total non-current assets	3,813	4,065	4,477
Inventories	675	949	1,088
Trade receivables	232	261	349
Receivables from financing activities	1,400	1,451	1,662
Tax receivables	16	12	16
Other current assets	153	130	138
Current financial assets	87	61	25
Cash and cash equivalents	1,389	1,122	1,742
Total current assets	3,953	3,986	5,020
Total assets	7,766	8,051	9,497
Equity and liabilities			
Equity attributable to owners of the parent	2,593	3,061	3,534
Non-controlling interests	10	10	9
Total equity	2,602	3,071	3,543
Employee benefits	111	123	134
Provisions	181	187	206
Deferred tax liabilities	127	137	110
Debt	2,812	2,477	3,352
Other liabilities	952	1,023	1,106
Other financial liabilities	20	14	62
Trade payables	903	931	946
Tax payables	59	89	38
Total liabilities	5,163	4,981	5,954
Total equity and liabilities	7,766	8,051	9,497

Source: Ferrari N.V. Form 20-F 2023 and 2024 (exact reported amounts, so totals balance in every year) and Excel model (Balance Sheet).

Assets: Total assets increased from €7,766m to €9,497m. The main drivers were capital expenditure on new models, technology and electrification (PP&E and intangible assets up €609m), higher inventories linked to product cycles (up €414m) and a higher cash balance (up €353m).

Equity: Total equity increased from €2,602m to €3,543m. Net profit of €2,783m in 2023-2024 more than covered dividends of €769m and share buybacks of €1,042m, so the equity base grew by almost €1 billion despite generous shareholder returns.

Liabilities: Debt rose from €2,812m to €3,352m, mainly because of a €500m bond issued in 2024 and higher securitisation funding for client financing. Net debt (debt and other financial

liabilities less cash and current financial assets) remained moderate at €1,647m, or 0.64x EBITDA, at the end of 2024.

Overall assessment: The balance sheet reflects a financially conservative company. Like many luxury brands, Ferrari relies mainly on internally generated funds rather than external borrowing, which supports long-term stability and limits exposure to interest rates and credit markets. For lenders, the steady strengthening of Ferrari's equity and the stable growth of total assets indicate a low-risk borrower with a solid capital base.

2.3 Cash Flow Analysis

Ferrari generates strong cash flows. Operating cash flow benefits from high margins and customer advance payments, while spending goes mainly into new models, capitalised development costs and the new e-building.

Table 3: Cash flow statement 2022-2024

€ million	2022A	2023A	2024A
Net profit	939	1,257	1,526
Depreciation and amortisation	546	662	667
Change in trade receivables	(48)	(33)	(94)
Change in inventories	(154)	(310)	(158)
Change in receivables from financing activities	(188)	(107)	(119)
Change in trade payables	104	43	8
Change in other operating assets and liabilities	140	49	(20)
Other operating items, net	64	155	117
Cash flows from operating activities	1,403	1,717	1,927
Investments in intangible assets	(457)	(487)	(507)
Investments in property, plant and equipment	(348)	(382)	(482)
Other investing activities, net	(1)	2	2
Cash flows used in investing activities	(805)	(866)	(987)
Net change in debt and other financial liabilities	95	(315)	701
Dividends paid	(250)	(329)	(440)
Dividends paid to non-controlling interests	(2)	(5)	(5)
Share repurchases	(397)	(461)	(581)
Cash flows used in financing activities	(554)	(1,109)	(325)
Translation exchange differences	-	(8)	5
Total change in cash	45	(267)	620
Cash at the end of the year	1,389	1,122	1,742
Key cash flow figures			
Free cash flow	599	848	938
FCF margin	11.8%	14.2%	14.0%
Cash returned to shareholders	648	794	1,026

Source: Ferrari N.V. Form 20-F 2024 and Excel model (Cash Flow Statement).

Cash flow from operations grew from €1,403m in 2022 to €1,927m in 2024. Capital expenditure rose from €805m to €989m under Ferrari's investment programme, but free cash flow (operating cash flow minus capex) still increased from €599m to €938m, or 14.0% of revenue. Ferrari's own measure, industrial free cash flow, increased from about €758m in 2022 to more than €1bn in 2024. Over the three years Ferrari returned €2,468m to shareholders through dividends and buybacks, slightly more than its free cash flow of €2,384m, and covered the difference with modest net borrowing.

Overall assessment: Ferrari produces stable cash flows and holds high liquidity, which gives it clear capacity to service new credit. Cash flows are also predictable because Ferrari builds to order and has long waiting lists for its cars.

2.4 Ratio Analysis

Table 4: Key ratios 2022-2024

€ million	2022A	2023A	2024A
Profitability			
Revenue growth	-	17.2%	11.8%
EBITDA margin	34.8%	38.2%	38.3%
EBIT margin	24.1%	27.1%	28.3%
Net profit margin	18.4%	21.1%	22.9%
Return on average equity	-	44.3%	46.1%
Return on average assets	-	15.9%	17.4%
Return on equity decomposition			
Return on net operating assets (RNOA)	-	30.5%	31.9%
Net borrowing cost (NBC)	-	0.9%	(0.1%)
Financial leverage	-	0.47x	0.45x
Return on equity (decomposed)	-	44.3%	46.1%
Efficiency			
Trade receivables (days)	16.6	16.0	19.1
Inventories (days of cost of sales)	93.0	115.6	119.3
Trade payables (days of cost of sales)	124.4	113.4	103.7
Cash conversion cycle (days)	(14.8)	18.2	34.7
Asset turnover	-	0.75x	0.76x
Liquidity			
Current ratio	2.04x	1.94x	2.33x
Quick ratio	1.70x	1.48x	1.83x
Leverage and coverage			
Net debt (€m)	1,356	1,308	1,647
Net debt / EBITDA	0.76x	0.57x	0.64x
Debt / equity	1.09x	0.81x	0.96x
Equity ratio	33.5%	38.1%	37.3%
Interest coverage (EBIT basis)	9.2x	11.0x	12.9x

Ratios based on average balances start in 2023 because 2021 balances are not part of the model. Liquidity ratios use short-term liabilities excluding debt (trade, tax, other and other financial liabilities). Source: Excel model (Financial Analysis).

The ratios confirm Ferrari's financial strength. Profitability improved over the period: EBITDA margin rose from 34.8% to 38.3% and net margin from 18.4% to 22.9%. Return on average equity increased from 44.3% in 2023 to 46.1% in 2024, and return on net operating assets from 30.5% to 31.9%. The decomposition shows that Ferrari's very high ROE comes mainly from its operations rather than from leverage: net financial obligations are only 0.45x of equity, and in 2024 financial income covered financial expenses.

Liquidity is solid, with a current ratio of 2.33x and a quick ratio of 1.83x in 2024. Leverage is low: net debt was 0.64x EBITDA and EBIT covered financial expenses 12.9 times.

Efficiency ratios reflect the build-to-order model. Receivables are collected in about 19 days, while inventory days rose from 93 to 119 as Ferrari built stock ahead of new model launches, which lengthened the cash conversion cycle to 35 days.

Overall assessment: The ratios reinforce the conclusion that Ferrari is financially sound and highly creditworthy. Even with lower demand or rising costs, the company would keep sufficient earnings to meet its obligations.

2.5 Overall Financial Assessment

Ferrari's financial performance in 2022-2024 shows a profitable and well-capitalised company. Revenues and margins continued to grow, equity increased significantly and cash generation remained strong. The company's financial position is supported by a conservative approach to leverage and a stable, affluent customer base.

From the perspective of a lending bank, Ferrari is a low-risk borrower with a proven ability to service new debt. The combination of strong operating results, high liquidity and moderate leverage gives sufficient assurance that Ferrari can repay its financial obligations for future expansion and projects.

3.0 Business Plan of the Company (without the Project)

This section presents Ferrari's expected performance for 2025-2030 under the existing product portfolio, excluding the residential project. The plan is calibrated to the 2025 guidance and 2030 targets Ferrari presented at its Capital Markets Day in October 2025. It is an integrated three-statement model: the income statement, balance sheet and cash flow statement are linked, and every figure below comes from the accompanying Excel model (Ferrari_Credit_Application_Model.xlsx).

3.1 Revenue forecast

Revenue is built bottom-up as the number of cars shipped multiplied by net revenue per unit shipped. Ferrari's own targets point to revenue of about €9bn in 2030, roughly 5% growth a year, driven by price and mix rather than volume. Shipments therefore grow slowly: +1% a year in EMEA and Rest of APAC and +2% in the Americas and in Mainland China, Hong Kong and Taiwan. Weighted by the 2024 regional mix (EMEA 45.1%, Americas 29.1%, Mainland China, Hong Kong and Taiwan 8.4%, Rest of APAC 17.3%), total shipments grow by about 1.4% a year, from 13,752 cars in 2024 to about 14,932 in 2030.

Net revenue per unit shipped rose from €385k in 2022 to €486k in 2024, a CAGR of 12.2%, thanks to price increases, a richer model mix and personalisation. The forecast assumes 5.0% in 2025 and 3.5% a year after that. Revenue therefore reaches €7,107m in 2025, in line with Ferrari's guidance of at least €7.1bn, and €9,041m in 2030, close to the €9bn target.

Table 5: Revenue build 2024A-2030F

Units / € million	2024A	2025F	2026F	2027F	2028F	2029F	2030F
Shipments by region (units)							
EMEA	6,204	6,266	6,329	6,392	6,456	6,520	6,586
Americas	4,003	4,083	4,165	4,248	4,333	4,420	4,508
Mainland China, HK and Taiwan	1,162	1,185	1,209	1,233	1,258	1,283	1,309
Rest of APAC	2,383	2,407	2,431	2,455	2,480	2,505	2,530
Total shipments	13,752	13,941	14,133	14,328	14,526	14,728	14,932
Shipment growth	0.7%	1.4%	1.4%	1.4%	1.4%	1.4%	1.4%
Net revenue per unit (€ thousands)	485.5	509.8	527.6	546.1	565.2	585.0	605.5
Growth in revenue per unit	11.1%	5.0%	3.5%	3.5%	3.5%	3.5%	3.5%
Net revenues	6,677	7,107	7,457	7,825	8,210	8,615	9,041
Revenue growth	11.8%	6.4%	4.9%	4.9%	4.9%	4.9%	4.9%

Source: Ferrari N.V. shipments by region (2024A) and Excel model (Revenue Build).

3.2 Business plan assumptions and balance sheet forecast

Cash in the forecast comes from the cash flow statement instead of being used as a balancing item. Every change in a balance sheet item therefore has a cash counterpart, and total assets equal total liabilities and equity in every forecast year (the balance check in the model is zero for 2022-2030). All assumptions are listed on the Inputs sheet of the model and summarised in Table 6.

Table 6: Forecast assumptions 2025-2030

Item	Assumption 2025-2030	Basis
Revenue	+6.4% in 2025, then about +4.9% a year (shipments +1.4%, revenue per unit +3.5%)	Ferrari guidance (at least €7.1bn in 2025) and 2030 target (about €9bn)
Cost of sales	49.5% of revenue in 2025, improving to 48.5% by 2030	Toward Ferrari's 2030 target of an EBITDA margin of at least 40%
SG&A	8.4% of revenue	2024 level
R&D	13.2% of revenue	Close to the 2024 level (13.4%)
Other expenses / result from investments	0.2% of revenue / €8m p.a.	2024 levels
Income tax	20.0% of profit before tax	2022-24 average 20.3% (patent box)
Trade receivables	19 days of revenue	2024: 19.1 days
Inventories	119 days of cost of sales	2024: 119.3 days
Trade payables	104 days of cost of sales	2024: 103.7 days
Receivables from financing activities	24.9% of revenue	2024 ratio, as client financing grows with sales
Other liabilities / provisions / other current assets	16.6% / 3.1% / 2.1% of revenue	2024 ratios
Capital expenditure	11.5% of revenue (5.8% PP&E + 5.7% intangibles)	About €4.7bn over 2026-30 (Ferrari target)
Depreciation / amortisation	14.5% of opening PP&E / 26.8% of opening intangibles	Implied from the 2024 roll-forward
Existing debt	Held at €3,352m with interest of 4.4% of opening debt	Refinanced at maturity, interest kept at the 2024 level (€146m)
Interest income	2.0% of opening cash	Euro deposit rates, excluding past FX and hedging gains
Dividends	35% of prior-year net profit, 40% from 2027	Ferrari distribution policy (raised to 40% in October 2025)
Share buybacks	€500m in 2025, €700m a year in 2026-30	Ferrari target of about €3.5bn over 2026-30
Other items	Goodwill, tax balances, deferred taxes, employee benefits held at 2024 levels	No acquisitions or restructuring

Source: Excel model (Inputs sheet).

Operating assets and liabilities follow these drivers, so they grow in line with revenue or cost of sales. Property, plant and equipment and intangible assets are rolled forward as opening balance plus capital expenditure minus depreciation or amortisation. Equity attributable to owners equals the opening balance plus net profit minus dividends and share buybacks, and non-controlling interests stay flat because their share of profit is paid out. Existing debt is held constant, as no acquisitions, new corporate financing or share issues are expected in the base case. Cash is the closing balance of the cash flow statement.

Without the project, revenue grows from €6,677m in 2024 to €9,041m in 2030 and EBITDA from €2,555m to €3,515m. The 2030 EBITDA margin of 38.9% is slightly below Ferrari's own target of at least 40%, which keeps the plan on the conservative side. Free cash flow of €8,061m over 2026-2030, in line with Ferrari's target of about €8bn, covers capital expenditure, dividends and buybacks in every year. Cash rises from €1,742m to €3,179m and net debt falls from 0.64x to 0.06x EBITDA.

4.0 Project

Note: the project described in this section is hypothetical. It was made up for an academic exercise and is not a real or announced Ferrari project.

4.1 Project's key features

Project name: Ferrari Residential Complex Miami

Investment: Development of a residential complex that embodies and promotes the Ferrari lifestyle, strengthens brand presence and extends Ferrari's ethos into real estate

Project type: High-end residential real-estate development

Location: Miami, FL, USA (coastal district)

Construction: Q4 2025 to Q4 2028 (3 years)

Handover of units: 2029 (60% of sellable area) and 2030 (40%)

Required loan: €1,100m term loan, 5.0% fixed, annuity repayment in 2029-2030

Equity contribution: €325m (Ferrari's own funds)

Total investment cost: €1,425m

Planned units: 260 apartments + 20 penthouses + 2 sky villas

Sellable residential area: 90,000 m²

Expected price per m²: €18,000 to €30,000 (base case €20,000)

Project IRR: 8.5% in the base case (unlevered, pre-tax), from 4.6% at €18,000 to 24.6% at €30,000 per m²

Break-even price: €15,833 per m² (€17,545 including loan interest)

4.2 Project description

The Ferrari Residential Complex will be a multi-tower, high-end development designed in collaboration with an internationally recognised architectural firm that specialises in luxury residential projects. The vision is to deliver a unique lifestyle experience inspired by the company's DNA: performance, innovation and craftsmanship.

Standout features

- Three high-rise towers: a 50-storey central tower and two 42-storey outer towers
- 260 luxury apartments with Ferrari-inspired interiors
- 20 penthouses with panoramic views
- 2 sky villas on top of towers 1 and 3, each with its own pool and outdoor terrace
- Ferrari design centre showcasing Ferrari's craftsmanship
- Private Ferrari owners' club lounge

- Wellness and spa, fitness centre, several pools and fine-dining restaurants
- Underground parking with charging stations for electric cars
- Marina access

Target customers

- High-income individuals from the USA, LATAM, Europe, Middle East and Asia
- Existing Ferrari clients (brand loyalty)
- Investors seeking premium real estate

Branded residences sell at an average premium of up to 30% over comparable unbranded homes (Savills, 2024). The plan assumes a Ferrari brand premium of about 25% over Miami luxury comparables, which sits within this range.

4.3 Investment information

The total investment cost of the Ferrari Residential Complex amounts to €1,425m, combining €1,100m of external financing and €325m of Ferrari's equity. The cost structure reflects the complexity and premium quality of the project. Construction represents the largest share of the budget, covering foundation works, high-rise tower construction, architectural finishes, materials and engineering. Additional costs relate to interior design, Ferrari's bespoke design features, luxury amenities, landscaping and infrastructure such as underground parking and marina access.

Spending is phased over the construction period: €237.5m in 2025 (design, permits and site works), €437.5m in each of 2026 and 2027 (structural works) and €312.5m in 2028 (interiors and finishing). The costs are capitalised as inventory, because the apartments are property developed for sale (IAS 2), and are released to cost of sales when the units are handed over. The cost assumptions are consistent with other branded developments in Miami's premium segment and reflect the architectural standards required by the Ferrari brand.

Table 10: Development cost and funding 2025-2030

€ million	Total	2025F	2026F	2027F	2028F	2029F	2030F

Source: Excel model (Residential Project).

4.4 SWOT analysis

Strengths

- Moves Ferrari into the fast-growing segment of branded residences
- Brand expansion without over-saturation
- High margins thanks to the brand premium per m²
- Favourable tax environment in Florida
- High demand for branded residences (e.g. Porsche Design Tower)
- Continuous inflow of wealthy residents and investors
- Strong foreign interest

Weaknesses

- Ferrari's limited experience in large-scale real estate development, which adds execution risk compared with established developers
- High initial capital requirement of €1,425m and a long construction period (3 years)
- Reliance on a niche group of high-income buyers
- Exposure to FX mismatch (revenues in USD, debt in EUR)
- High customer expectations due to the Ferrari brand, increasing pressure on design and execution quality
- Single-project concentration risk: the whole investment is in one location and one product type

Opportunities

- Replicating a successful project in other real estate markets
- Exposing the Ferrari brand to a wider audience outside motorsport
- Bringing residents and investors into the broader Ferrari product ecosystem
- Flagship project of the decade for Ferrari

Threats

- Over-saturation of the market with branded residences
- Miami losing its status as a prestigious place to live for wealthy individuals
- Uncertain direction of the US economy as of 2025
- FX fluctuations during periods of global market uncertainty, as the project is financed in euros
- Delays in completion
- Construction cost increases during the project

4.5 Bank loan details

The requested loan is a €1,100m term loan at a fixed interest rate of 5.0% a year, structured around the construction timeline and the expected sale of units. During the three-year construction period the loan is drawn gradually in equal quarterly tranches (€350.0m in 2026, €437.5m in 2027 and €312.5m in 2028), so Ferrari only borrows as construction progresses. The loan is interest-only until completion and is then repaid as an annuity in eight equal quarterly instalments from Q1 2029 to Q4 2030, funded by the handover of units. Matching the repayment schedule to the sales cycle avoids refinancing risk. The borrower is Ferrari N.V. itself, so the loan has full recourse to the group and not only to the project.

4.5.1 Rationale for debt financing

Ferrari generates sufficient internal cash, but external financing is justified by the strategic importance and scale of the project. Financing it entirely with equity could limit Ferrari's ongoing R&D and electrification commitments. Borrowing preserves capital for automotive innovation while the brand expands into real estate. The project also generates substantial cash inflows from unit sales, which makes the debt self-liquidating and reduces overall financial risk.

4.5.2 Loan repayment schedule

From Q1 2029 the €1,100m loan is repaid as an annuity: eight equal quarterly instalments of €145.35m each, at a quarterly interest rate of 1.25% (5.0% a year divided by four). Each instalment first pays the interest on the balance outstanding at the start of the quarter, and the rest repays principal. As the balance falls, the interest part shrinks and the principal part grows, and the loan is fully repaid in Q4 2030. The instalment in the model is checked against Excel's PMT function.

Table 11: Project loan, annual summary

€ million	Total	2025F	2026F	2027F	2028F	2029F	2030F
Opening balance	-	-	-	350.0	787.5	1,100.0	563.7

Q4 2030	143.55	-	1.79	143.55	145.35	-
Total		1,100.00	154.02	1,100.00	1,254.02	-

€ million. Drawdowns are made at the start of each quarter and interest accrues on the balance after the drawdown. Source: Excel model (Project Loan).

Total interest over the life of the loan is €154.0m. The interest-only period costs €91.3m, which Ferrari pays from its own operating cash flow of more than €2bn a year.

4.6 Investment financing

The investment is financed with €325m of Ferrari's own funds and the €1,100m term loan. Ferrari's equity is spent first: €237.5m in 2025 and €87.5m in 2026 cover the start of development, permitting, design and the first construction works. The loan then funds the remaining construction costs in 2026-2028. This structure shows the bank Ferrari's early commitment to the project while keeping flexibility for the company.

5.0 Implementation of the Project into the Business Plan

The project is added to the standalone business plan as a separate business line. The Excel model presents a full income statement, balance sheet and cash flow statement for Ferrari with the project, and both the standalone and the combined balance sheets balance in every year.

5.1 Income statement

During construction (2025-2028) the project brings no revenue. Development costs are capitalised as inventory, so the only income statement effects in these years are the interest on the project loan (€10.9m in 2026, €31.2m in 2027 and €49.1m in 2028) and lower interest income on the cash Ferrari puts in as equity. Net profit is therefore €12.0m to €42.5m lower than in the standalone plan in these years.

Revenue is recognised when units are handed over: 60% of the sellable area in 2029 (€1,080m) and 40% in 2030 (€720m) at an average price of €20,000 per m². After the cost of the units sold (€855m and €570m), loan interest (€45.0m and €17.7m) and US tax of 25.3%, the project adds €128m to net profit in 2029 and €100m in 2030. Over 2025-2030 it adds €145m in total. The one-off profit on handover temporarily lifts group net profit and ROE in 2029-2030.

Table 13: Income statement with the project 2024A-2030F

Change vs. standalone	-	-	(12.0)	(28.7)	(42.5)	128.2	100.0

Operating costs include SG&A, R&D, other expenses and the result from investments. Source: Excel model (Pro-forma Statements).

For simplicity, loan interest is expensed as incurred. Under IAS 23 it would be capitalised into the project inventory and reach the income statement through cost of sales on handover. Total profit over the life of the project would be the same.

5.2 Balance sheet and cash flow

On the asset side, the project inventory builds up to €1,425m at the end of 2028 and is released to cost of sales on handover. On the liability side, the project loan rises to €1,100m by the end of 2028 and is repaid in full by Q4 2030. Cash is lower than in the standalone plan while Ferrari funds its €325m equity contribution and the construction-period interest. The lowest cash balance is €1,823m in 2025. Once units are delivered, sales receipts repay the loan, and cash ends 2030 at €3,306m, €127m above the standalone plan. Equity is slightly lower during construction and higher from 2029, when the project profit is recognised.

5.3 Credit metrics

Leverage rises during construction but stays low. Net debt to EBITDA peaks at 0.72x in 2028, compared with 0.25x without the project, and falls to 0.29x in 2029 after the first handovers. EBITDA covers total interest, including the project loan, at least 16.1x in every year.

On its own, the project covers its debt service 1.78x in 2029 and 1.18x in 2030, when only 40% of the units are handed over. The 2030 figure is below the 1.20x a bank would usually ask of a stand-alone project, but this is a corporate loan with full recourse to Ferrari N.V. The relevant test is therefore group cash flow: Ferrari's free cash flow covers the annual debt service of €581m 2.9 to 3.1 times in 2029-2030.

Table 15: Credit metrics, standalone vs. with the project

€ million	2024A	2025F	2026F	2027F	2028F	2029F	2030F
Net debt (standalone)	1,647	1,328	1,138	983	780	524	210
Net debt (with project)	1,647	1,566	1,825	2,131	2,272	1,016	83
Net debt / EBITDA (standalone)	0.64x	0.49x	0.40x	0.33x	0.25x	0.16x	0.06x
Net debt / EBITDA (with project)	0.64x	0.57x	0.64x	0.71x	0.72x	0.29x	0.02x
EBITDA / interest (standalone)	17.5x	18.5x	19.4x	20.4x	21.5x	22.6x	23.8x
EBITDA / interest (with project)	17.5x	18.5x	18.1x	16.8x	16.1x	18.5x	22.2x
Equity ratio (with project)	37.3%	39.9%	40.4%	40.3%	40.9%	45.1%	49.3%
Project loan balance	-	-	350	788	1,100	564	-
Project DSCR	-	n.m.	n.m.	n.m.	n.m.	1.78x	1.18x
Group FCF / project debt service	-	n.m.	n.m.	n.m.	n.m.	2.92x	3.10x

Net debt is debt, including the project loan, plus other financial liabilities, less cash and current financial assets. Source: Excel model (Credit Metrics).

5.4 Project returns and sensitivity

In the base case (€20,000 per m²) the project earns a development profit of €375m before financing and tax, a 20.8% margin on revenue of €1,800m. The unlevered pre-tax project IRR is 8.5% and the after-tax equity IRR to Ferrari is 10.3%. The break-even selling price is €15,833 per m² before financing and €17,545 per m² including loan interest, so prices can fall by about 12% before the project makes a loss.

Table 16: Sensitivity to the average selling price

Average price (€ per m ²)	Revenue (€m)	Development profit (€m)	Unlevered IRR
18,000	1,620	195	4.6%
20,000	1,800	375	8.5%
24,000	2,160	735	15.6%
30,000	2,700	1,275	24.6%

Base case highlighted. Source: Excel model, Residential Project.

5.5 Conclusion

The project raises Ferrari's debt and interest cost for four years, but the effect on the group is small: leverage stays below 1.0x net debt to EBITDA, interest cover remains far above typical covenant levels and the loan is repaid from unit sales by the end of 2030. After repayment the balance sheet returns to its conservative structure, with higher equity and cash than in the standalone plan. In the long term the project extends the Ferrari brand into a high-margin segment with global demand and can serve as a pilot for similar developments elsewhere, which supports a positive credit decision.
